

OAS-003 — Identity Architecture

Status: Foundational

Authority: Architectural

Depends on:

- OAS-000
 - OAS-001
 - OAS-002
 - OCS-000 through OCS-032
-

Purpose

This specification defines the Identity Architecture of Organodynamics.

Identity is the architectural anchor from which continuity emerges.

Everything else may evolve.

Identity must remain continuous.

Identity Architecture therefore exists to preserve constitutional continuity independently of implementation.

1. Architectural Objective

The objective of Identity Architecture is to guarantee that constitutional identity survives arbitrary technological, organizational, computational, and temporal change.

Architecture SHALL assume:

Identifiers may change.

Storage may change.

Representations may change.

Identity SHALL remain.

2. Architectural Separation

Identity SHALL remain independent of:

Storage location.

Database identifiers.

Network addresses.

Implementation references.

User interface representations.

Authentication mechanisms.

None of these SHALL define constitutional identity.

3. Identity Resolution

Architectural systems SHALL resolve constitutional identity without depending upon implementation-specific identifiers.

Resolution SHALL preserve:

Historical continuity.

Canonical relationships.

Migration history.

Version lineage.

Identity resolution SHALL remain explainable.

4. Identity Continuity

Every constitutional construct SHALL preserve continuous identity across:

Migration.

Federation.

Serialization.

Translation.

Replication.

Recovery.

Identity SHALL never silently fork.

5. Identity Evolution

Identity MAY evolve through constitutional history.

Evolution SHALL preserve:

Historical lineage.

Previous identities (where applicable).

Reasons for evolution.

Compatibility relationships.

Identity evolution SHALL remain reconstructable.

6. Identity Relationships

Identity SHALL expose architectural relationships.

Relationships MAY include:

Parent.

Derived.

Merged.

Split.

Superseded.

Equivalent.

Relationships SHALL remain explicit.

7. Identity Independence

Independent implementations SHALL resolve equivalent constitutional identities.

Different storage technologies MAY produce different internal identifiers.

Architectural identity SHALL remain equivalent.

8. Identity Federation

Federated Places SHALL preserve local identity while supporting shared constitutional identity.

Federation SHALL NOT require centralized identity ownership.

Identity SHALL remain sovereign.

9. Identity Recovery

Identity SHALL remain recoverable from:

Constitutional history.

Canonical relationships.

Historical references.

Applicable constitutional specifications.

Recovery SHALL remain independent of implementation.

10. Identity Integrity

Identity Integrity SHALL require:

Continuity.

Traceability.

Relationship preservation.

Historical reconstruction.

Semantic preservation.

Violation SHALL constitute architectural failure.

11. Identity Verification

Architectural verification SHALL demonstrate:

Identity continuity.

Migration correctness.

Relationship preservation.

Historical reconstruction.

Equivalent constitutional identity across independent implementations.

12. Identity Architecture Pattern

The Identity Pattern SHALL organize architecture around constitutional identity rather than implementation references.

Every architectural dependency SHALL reference constitutional identity.

Implementation identifiers SHALL remain local implementation concerns.

13. Identity Architecture Test

Identity Architecture satisfies this specification when two independent implementations, using different technologies and different internal identity mechanisms, produce identical constitutional identity graphs after reconstruction.

Implementation SHALL differ.

Constitutional identity SHALL remain equivalent.

Conformance

An architecture conforms to this specification when constitutional identity remains stable, reconstructable, sovereign, and implementation-independent across every architectural transformation.

Architectural Principle

Identity is not an identifier.

Identity is the continuous thread that allows understanding to survive change.

Everything else may be rebuilt.

If identity survives,

history survives.

If history survives,

understanding survives.

Identity Architecture therefore preserves the possibility of constitutional continuity itself.
