

OAS-005 — Voice Architecture

Status: Foundational

Authority: Architectural

Depends on:

- OAS-000
 - OAS-001
 - OAS-002
 - OAS-003
 - OAS-004
 - OCS-000 through OCS-032
-

Purpose

This specification defines the architectural concept of the Voice.

A Voice is the primary architectural unit through which constitutional understanding is expressed.

A Participant is the contributor.

A Contribution is the act.

A Voice is the persistent architectural expression through which contributions acquire continuity.

Organodynamics is therefore organized around Voices rather than users, roles, or votes.

1. Architectural Objective

The objective of Voice Architecture is to preserve perspectives independently of the entities that temporarily express them.

Participants may evolve.

Implementations may evolve.

Voices SHALL remain historically continuous.

2. Architectural Definition

A Voice is a persistent architectural construct representing a coherent perspective participating within one or more Places.

A Voice SHALL possess:

Identity.

History.

Relationships.

Context.

Participation history.

Architectural continuity.

A Voice SHALL remain reconstructable.

3. Separation of Concerns

The architecture SHALL distinguish between:

Participant

↓

Voice

↓

Contribution

↓

Understanding

Participants produce Contributions.

Voices organize Contributions.

Understanding emerges from the interaction of Voices.

These constructs SHALL remain architecturally distinct.

4. Voice Identity

Every Voice SHALL possess stable architectural identity.

Identity SHALL survive:

Participant evolution.

Implementation replacement.

Migration.

Federation.

Translation.

Historical reconstruction.

5. Voice Independence

A Participant MAY contribute through multiple Voices.

Multiple Participants MAY jointly maintain a Voice.

Artificial Participants MAY contribute through Voices.

Voice identity SHALL remain independent of contributor identity.

6. Voice Evolution

Voices MAY evolve.

Evolution SHALL preserve:

Historical continuity.

Perspective lineage.

Contribution history.

Revision history.

Evolution SHALL remain explainable.

7. Voice Relationships

Voices MAY relate through:

Agreement.

Constructive disagreement.

Extension.

Specialization.

Collaboration.

Reference.

Relationships SHALL remain explicit.

Architectural interaction SHALL preserve diversity.

8. Voice Orchestration

Architectural interaction SHALL seek orchestration rather than aggregation.

The architecture SHALL optimize for:

Expanded understanding.

Perspective coverage.

Constructive tension.

Explanatory quality.

Architectural orchestration SHALL NOT optimize for majority formation.

9. Voice Memory

Every Voice SHALL preserve:

Contribution history.

Questions asked.

Evidence supplied.

Explanations proposed.

Revisions accepted.

Learning history.

Memory SHALL remain independent of implementation.

10. Voice Federation

Voices MAY participate across multiple Places.

Participation SHALL preserve:

Local context.

Voice continuity.

Contribution attribution.

Historical relationships.

Federation SHALL NOT fragment Voice identity.

11. Voice Architecture Pattern

The Voice Pattern organizes architecture around evolving perspectives rather than fixed identities.

Architectural reasoning SHALL follow:

Perspective

Contribution

Interaction

Understanding

Not:

Identity

Authority

Decision

12. Voice Verification

Architectural verification SHALL demonstrate that independent implementations preserve:

Voice continuity.

Voice relationships.

Contribution attribution.

Historical reconstruction.

Perspective evolution.

Equivalent implementation SHALL NOT be required.

Equivalent Voice behavior SHALL.

13. Architectural Voice Test

Voice Architecture satisfies this specification when an independent architect can reconstruct:

What perspective a Voice represents.

How that perspective evolved.

Which Contributions belong to it.

How it interacted with other Voices.

How it influenced constitutional understanding.

How it survives contributor turnover.

If any answer cannot be reconstructed,

Voice Architecture is constitutionally incomplete.

Conformance

An implementation conforms to this specification when Voices remain persistent architectural entities capable of preserving evolving perspectives independently of contributors, technologies, or implementation strategies.

Architectural Principle

People enter.

People leave.

Artificial intelligences appear.

Artificial intelligences disappear.

Contributors change.

Voices continue.

The architecture therefore preserves not who happened to speak,
but the continuity of the perspectives through which understanding became possible.
