

# OCS-002 — Constitutional Logic

**Status:** Foundational

**Authority:** Constitutional

**Depends on:** OCS-000, OCS-001

---

## Purpose

This specification defines the logical system governing constitutional reasoning.

The Constitutional Alphabet defines semantic primitives.

The Constitutional Grammar defines composition.

The Constitutional Logic defines valid inference.

Every constitutional conclusion SHALL be derivable through this specification.

Implementations MAY use different reasoning engines.

Constitutional validity SHALL remain independent of implementation.

---

## 1. Constitutional Statement

A Constitutional Statement is the smallest unit capable of expressing constitutional meaning.

Every Constitutional Statement SHALL contain:

- Identity
- Scope
- Context
- Meaning
- Confidence
- Supporting Evidence
- Traceability

A Constitutional Statement SHALL remain independently referenceable.

---

## 2. Constitutional Proposition

A Proposition is a Constitutional Statement whose validity may change through evidence.

A Proposition SHALL NOT be interpreted as permanent truth.

Every Proposition SHALL expose:

Current Interpretation

Supporting Evidence

Contradictory Evidence

Confidence

Known Limitations

Revision History

---

## 3. Constitutional Inference

Inference derives new understanding from existing constitutional knowledge.

Every inference SHALL preserve:

Meaning

Context

Traceability

Evidence provenance

Inference SHALL remain reproducible.

---

## 4. Constitutional Validity

A constitutional conclusion SHALL be considered valid only when:

Its reasoning remains reconstructable.

Its assumptions remain observable.

Its supporting evidence remains available.

Its dependencies remain identifiable.

Its limitations remain explicit.

Validity SHALL remain revisable.

---

## 5. Constitutional Assumptions

Assumptions SHALL be first-class constitutional constructs.

Every assumption SHALL declare:

Origin

Purpose

Evidence

Confidence

Known Risks

Assumptions SHALL NEVER remain implicit.

---

## 6. Constitutional Contradiction

Contradictions SHALL NOT invalidate the constitutional system.

Contradictions indicate one or more of the following:

- Missing Evidence
- Incomplete Context
- Alternative Interpretation
- Semantic Ambiguity
- Incorrect Assumption

Contradictions SHALL generate investigation.

Not suppression.

---

## 7. Constitutional Consistency

Consistency SHALL mean:

"No constitutional statement contradicts another statement within the same Context and Interpretation."

Consistency SHALL NOT require universal agreement.

Different contexts MAY legitimately produce different conclusions.

---

## 8. Constitutional Equivalence

Two constitutional statements SHALL be equivalent only when:

Meaning is equivalent.

Context is equivalent.

Evidence is equivalent.

Interpretation is equivalent.

Equivalent wording SHALL NOT imply equivalent meaning.

Equivalent meaning MAY exist despite different wording.

---

## 9. Constitutional Uncertainty

Unknowns SHALL participate in reasoning.

Reasoning SHALL distinguish between:

Known

Unknown

Assumed

Estimated

Observed

Inferred

No implementation SHALL silently merge these categories.

---

## 10. Constitutional Revision

Every constitutional conclusion SHALL remain revisable.

Revision SHALL preserve:

Original conclusion

Reason for revision

New evidence

Historical explanation

Revision SHALL increase constitutional understanding.

Not replace constitutional history.

---

## 11. Constitutional Explanation

Every constitutional conclusion SHALL answer:

What evidence supports this?

What assumptions were made?

What reasoning was applied?

What remains uncertain?

What evidence could invalidate this conclusion?

Failure to answer these questions SHALL render the conclusion constitutionally incomplete.

---

## 12. Constitutional Non-Knowledge

The system SHALL explicitly represent:

Questions

Unknowns

Missing Evidence

Incomplete Models

Unresolved Contradictions

These SHALL be considered constitutional knowledge about the limits of current understanding.

They SHALL NOT be discarded.

---

## 13. Constitutional Stability

A constitutional conclusion becomes more stable when:

Independent evidence converges.

Alternative interpretations have been explored.

Contradictions have been investigated.

Predictive capability improves.

Stability SHALL NOT be interpreted as permanence.

---

## 14. Constitutional Discovery

Discovery occurs when constitutional reasoning produces a superior explanation while preserving historical continuity.

Discovery SHALL expose:

Previous understanding

New understanding

Reason for change

Evidence supporting change

Outstanding uncertainty

---

## 15. Constitutional Logic Invariants

Every conforming reasoning process SHALL preserve:

Identity

Meaning

Context

History

Evidence

Traceability

Continuity

Violation of any invariant SHALL invalidate the reasoning process.

---

## Conformance

An implementation conforms to this specification if independent reasoning systems, operating on equivalent constitutional inputs, produce constitutionally equivalent conclusions.

Equivalent algorithms are not required.

Equivalent implementation technologies are not required.

Equivalent constitutional reasoning is required.

---

# Final Principle

The purpose of Constitutional Logic is not to guarantee certainty.

Its purpose is to guarantee that every conclusion remains explainable, revisable, and continuously improvable.

Organodynamics does not protect conclusions.

It protects the integrity of the path that produced them.
