

OCS-008 — Constitutional Validation

Status: Foundational

Authority: Constitutional

Depends on:

- OCS-000 — Constitutional Alphabet
 - OCS-001 — Constitutional Grammar
 - OCS-002 — Constitutional Logic
 - OCS-003 — Constitutional Mathematics
 - OCS-004 — Constitutional Semantics
 - OCS-005 — Constitutional Ontology
 - OCS-006 — Constitutional Epistemology
 - OCS-007 — Constitutional Methodology
-

Purpose

This specification defines how constitutional validity is established.

Validation does not determine truth.

Validation determines whether a constitutional construct satisfies the principles of Organodynamics.

Every constitutional construct SHALL be capable of validation.

Validation SHALL remain independent of implementation technology.

1. Constitutional Validation

Validation is the constitutional process of determining whether a construct preserves constitutional integrity.

Validation SHALL evaluate:

Identity

Meaning

History

Evidence

Traceability

Context

Continuity

Validation SHALL produce a constitutional result.

2. Validation Scope

Every validation SHALL explicitly declare its scope.

Possible scopes include:

Semantic

Logical

Epistemic

Methodological

Structural

Behavioral

Computational

A validation SHALL NOT claim results outside its declared scope.

3. Validation Inputs

Every validation SHALL identify:

Target construct

Applicable constitutional specifications

Supporting evidence

Known assumptions

Validation context

Validation version

Inputs SHALL remain historically reconstructable.

4. Validation Outputs

Every validation SHALL produce:

Validation Status

Observed Findings

Supporting Evidence

Known Limitations

Remaining Questions

Recommended Actions

Validation SHALL remain explainable.

5. Validation States

Every validation SHALL conclude with one of the following states:

Conforming

Provisionally Conforming

Non-Conforming

Insufficient Evidence

Unable to Validate

Every state SHALL include justification.

6. Constitutional Conformance

Conformance means that a construct satisfies all applicable constitutional requirements.

Conformance SHALL NOT imply:

Correctness

Completeness

Permanence

Future immunity from revision

Conformance expresses present constitutional integrity.

7. Constitutional Non-Conformance

Non-Conformance indicates violation of one or more constitutional requirements.

Every Non-Conformance SHALL identify:

Violated requirement

Observed behavior

Supporting evidence

Potential impact

Suggested remediation

Non-Conformance SHALL remain historically visible.

8. Validation Evidence

Validation SHALL rely upon observable evidence.

Evidence MAY include:

Experiments

Reasoning

Historical reconstruction

Independent implementation

Formal verification

Empirical observation

Authority SHALL NOT constitute validation evidence.

9. Independent Validation

Constitutional validation SHOULD be independently repeatable.

Independent validators SHALL be able to reconstruct:

Validation context

Reasoning

Evidence

Conclusion

Differences between validators SHALL become constitutional information.

10. Validation Traceability

Every validation SHALL remain traceable.

Traceability SHALL include:

Target

Validator

Method

Evidence

Reasoning

Outcome

Revision history

No validation SHALL become historically opaque.

11. Validation of Assumptions

Validation SHALL explicitly evaluate declared assumptions.

Undeclared assumptions SHALL invalidate methodological completeness.

Invalid assumptions SHALL initiate constitutional review.

12. Validation of Meaning

Validation SHALL confirm that constitutional meaning remains preserved across:

Representation changes

Migration

Translation

Serialization

Implementation replacement

Failure to preserve meaning SHALL constitute critical constitutional failure.

13. Validation Through Reconstruction

A constitutional construct SHOULD be reconstructable from:

Its identity

Its history

Its relationships

Its evidence

Its context

Successful reconstruction strengthens constitutional confidence.

Failure of reconstruction SHALL trigger investigation.

14. Validation Through Independent Builders

A specification SHALL be considered mature when independent builders, using different implementation technologies, produce constitutionally equivalent behavior.

Equivalent code SHALL NOT be required.

Equivalent architecture SHALL NOT be required.

Equivalent constitutional behavior SHALL be required.

15. Validation Lifecycle

Every validation SHALL itself possess a lifecycle.

Created

↓

Executed

↓

Reviewed

↓

Accepted

or

↓

Revised

or

↓

Superseded

Validation history SHALL remain preserved.

16. Constitutional Certification

Certification MAY be issued for a constitutional construct.

Certification SHALL indicate only:

Observed constitutional conformance

Applicable specification version

Validation scope

Certification SHALL NOT imply permanent correctness.

Certification SHALL remain subject to future revision.

17. Constitutional Integrity Review

Validation SHALL conclude by answering the following constitutional questions:

Has Identity been preserved?

Has Meaning been preserved?

Has History been preserved?

Has Evidence remained attributable?

Has Context remained sufficient?

Can the construct be reconstructed?

Can the reasoning be explained?

If any answer is negative,

constitutional integrity has not been demonstrated.

Conformance

An implementation conforms to this specification when independent constitutional validators can consistently determine equivalent validation outcomes using equivalent constitutional evidence and reasoning.

Constitutional Principle

Validation is not the search for perfection.

Validation is the disciplined demonstration that constitutional meaning has been preserved.

A construct is not valuable because it cannot fail.

A construct is valuable because its failures can be observed, explained, corrected, and learned from without losing constitutional continuity.
