

ODM-007 — Evaluation Criteria

Status: Foundational

Authority: Methodology

Depends on:

- ODM-000 through ODM-006
 - OCS-000 through OCS-032
 - OAS-000 through OAS-031
 - OIS-000 through OIS-019
 - OGD-000 through OGD-023
-

Purpose

This specification defines the constitutional role of Evaluation Criteria within the Organodynamics Discovery Methodology.

Before a Hypothesis is investigated, the standards by which it will be evaluated SHALL be explicitly defined.

Evaluation Criteria establish the conditions under which evidence strengthens, weakens, refines, or rejects a Hypothesis.

Criteria SHALL precede evaluation.

They SHALL not be derived from the outcome of evaluation.

1. Objective

The objective of Evaluation Criteria is to ensure that methodological judgment remains transparent, reproducible, and resistant to retrospective reinterpretation.

Evaluation Criteria SHALL preserve:

Fairness.

Consistency.

Transparency.

Accountability.

Methodological integrity.

2. Definition

Evaluation Criteria are the explicit constitutional standards used to assess the explanatory adequacy of a Hypothesis.

Criteria MAY include:

Predictive success.

Consistency with observations.

Explanatory scope.

Internal coherence.

Conceptual economy.

Compatibility with the constitutional corpus.

Reproducibility.

Additional criteria MAY be introduced where constitutionally justified.

3. Establishment

Evaluation Criteria SHALL be documented before any formal investigation intended to evaluate the Hypothesis.

The documented criteria SHALL identify:

What observations would strengthen the Hypothesis.

What observations would weaken it.

What observations would falsify it.

What outcomes would require revision.

The rationale for each criterion.

4. Relationship to Evidence

Evidence SHALL be interpreted in relation to previously established Evaluation Criteria.

Criteria SHALL not be rewritten solely to accommodate unexpected outcomes.

If revision becomes necessary, the revision and its justification SHALL become part of the permanent methodological record.

5. Comparative Evaluation

Evaluation Criteria SHOULD permit meaningful comparison among competing Hypotheses addressing the same Problem Frame.

Comparative evaluation SHALL preserve methodological fairness and transparency.

6. Historical Preservation

Every set of Evaluation Criteria SHALL preserve:

Its original formulation.

Subsequent revisions.

Reasons for revision.

Associated Hypotheses.

Applicable evidence.

Historical continuity.

7. Verification

Verification SHALL demonstrate:

Criterion clarity.

Pre-registration.

Methodological consistency.

Evidence traceability.

Historical continuity.

Independent reproducibility.

8. Evaluation Criteria Test

Evaluation Criteria satisfy this specification when independent reviewers, applying the documented criteria to the same body of evidence, consistently reach constitutionally compatible assessments regarding the explanatory status of a Hypothesis.

Conformance

An investigation conforms to this specification when its Evaluation Criteria are established prior to evaluation, explicitly documented, historically preserved, methodologically transparent, independently reproducible, and clearly related to the associated Hypothesis.

Methodological Principle

A fair investigation does not decide in advance which explanation is correct.

It decides in advance how correctness will be judged.

By separating criteria from outcomes,

Organodynamics protects inquiry from the temptation to redefine success after the evidence has already spoken.

The integrity of discovery depends as much on the fairness of its standards

as on the quality of its ideas.
