

OGD-009 — Concept Lifecycle

Status: Foundational

Authority: Terminology

Depends on:

- OGD-000 through OGD-008
 - OCS-000 through OCS-032
 - OAS-000 through OAS-031
 - OIS-000 through OIS-019
-

Purpose

This specification defines the constitutional lifecycle of canonical concepts within the Organodynamics corpus.

Concepts are not static artifacts.

They are living elements of a growing discipline.

The Concept Lifecycle defines how concepts emerge, mature, evolve, deprecate, and remain historically interpretable without compromising constitutional continuity.

Concepts SHALL evolve.

Meaning SHALL remain accountable.

1. Objective

The objective of the Concept Lifecycle is to preserve the long-term stability of the Organodynamics language while allowing disciplined conceptual evolution.

Every canonical concept SHALL possess an observable lifecycle.

That lifecycle SHALL itself become constitutional history.

2. Lifecycle States

Every canonical concept SHALL exist in one of the following constitutional states.

Proposed

↓

Candidate

↓

Canonical

↓

Revised

↓

Deprecated

↓

Historical

↓

Archived

Additional lifecycle states MAY be introduced through constitutional revision.

3. Admission

A concept SHALL enter the lifecycle only after demonstrating:

Conceptual necessity.

Semantic uniqueness.

Terminological compatibility.

Constitutional relevance.

Admission SHALL become part of the concept's permanent history.

4. Evolution

Canonical concepts MAY evolve.

Evolution SHALL preserve:

Canonical identity.

Historical definitions.

Reasons for revision.

Affected specifications.

Compatibility guidance.

Every revision SHALL remain reconstructable.

5. Deprecation

A concept MAY be deprecated.

Deprecation SHALL preserve:

Historical interpretation.

Replacement guidance.

Cross-references.

Specification lineage.

Deprecated concepts SHALL remain permanently discoverable.

6. Concept Merging and Splitting

Conceptual evolution MAY include:

Merging multiple concepts.

Splitting one concept into multiple concepts.

Such evolution SHALL preserve:

Historical lineage.

Semantic traceability.

Migration guidance.

No historical meaning SHALL become irrecoverable.

7. Historical Preservation

Historical concepts SHALL remain part of the Organodynamics corpus.

Historical preservation SHALL include:

Original definitions.

Applicable specification versions.

Historical relationships.

Revision chronology.

History SHALL remain explorable.

8. Verification

Verification SHALL demonstrate:

Lifecycle correctness.

Historical continuity.

Semantic traceability.

Identity preservation.

Compatibility.

Independent interpretability.

9. Concept Lifecycle Test

The Concept Lifecycle satisfies this specification when independent readers can reconstruct the complete historical evolution of every canonical concept, including its origin, revisions, relationships, deprecations, and current constitutional meaning without consulting sources outside the Organodynamics corpus.

Conformance

The Organodynamics Glossary conforms to this specification when every canonical concept possesses a documented lifecycle, historically attributable evolution, semantic continuity, explicit migration guidance, and independently verifiable conceptual lineage.

Terminological Principle

Concepts are born.

They mature.

Sometimes they divide.

Sometimes they merge.

Sometimes they retire.

A living discipline therefore preserves not only what its concepts mean today,

but also the complete story of how those meanings came to exist.

For the history of a concept is often as valuable as the concept itself.
