

OGD-012 — Semantic Discovery

Status: Foundational

Authority: Terminology

Depends on:

- OGD-000 through OGD-011
 - OCS-000 through OCS-032
 - OAS-000 through OAS-031
 - OIS-000 through OIS-019
-

Purpose

This specification defines the constitutional principles governing semantic discovery throughout the Organodynamics corpus.

A discipline cannot rely solely on readers already knowing what to search for.

It SHALL also enable the discovery of relationships, concepts, patterns, and knowledge that are not yet known to the reader.

Semantic Discovery SHALL reveal constitutional understanding.

It SHALL not merely retrieve matching words.

1. Objective

The objective of Semantic Discovery is to enable humans and machines to navigate the Organodynamics corpus through meaning rather than syntax.

Discovery SHALL improve:

Learning.

Research.

Exploration.

Cross-disciplinary understanding.

Future constitutional evolution.

2. Definition

Semantic Discovery is the constitutional capability to identify relevant concepts, specifications, relationships, and historical developments based upon semantic proximity rather than textual coincidence.

Discovery SHALL preserve meaning.

Not merely vocabulary.

3. Discovery Paths

The Organodynamics corpus SHALL support multiple discovery paths, including:

Concept relationships.

Taxonomy.

Authority classes.

Lifecycle state.

Specification references.

Historical lineage.

Constitutional dependencies.

Architectural relationships.

Implementation mappings.

Discovery SHALL remain composable.

4. Semantic Navigation

Readers and automated systems SHOULD be capable of navigating from any canonical concept to:

Related concepts.

Dependent concepts.

Historical predecessors.

Successor concepts.

Applicable specifications.

Relevant examples.

Associated RFCs.

Navigation SHALL remain explainable.

5. Machine Discovery

Machine-readable representations SHALL preserve:

Canonical identifiers.

Relationship semantics.

Authority.

Taxonomy.

Historical lineage.

Specification references.

Machines SHALL discover.

They SHALL not redefine.

6. Cross-Volume Discovery

Discovery SHALL operate across the complete Organodynamics corpus.

Relationships MAY connect concepts appearing in:

Constitutional Specifications.

Architectural Specifications.

Implementation Specifications.

Glossary.

Methodological Specifications.

Reference documents.

Volume boundaries SHALL not restrict understanding.

7. Verification

Verification SHALL demonstrate:

Discovery completeness.

Semantic correctness.

Navigation consistency.

Historical traceability.

Machine interpretability.

Independent reproducibility.

8. Semantic Discovery Test

Semantic Discovery satisfies this specification when independent readers and independent automated systems consistently identify constitutionally relevant concepts, specifications, and relationships without prior knowledge of their names, locations, or publication order.

Conformance

The Organodynamics corpus conforms to this specification when semantic discovery remains meaning-preserving, historically traceable, cross-volume, machine-interpretable, and independently reproducible.

Terminological Principle

A mature discipline does not merely preserve knowledge.

It makes knowledge discoverable.

The Organodynamics corpus therefore treats discovery as a constitutional capability,

ensuring that every new learner,

every future researcher,

and every intelligent system can uncover relationships that were always present,

even before they knew those relationships existed.
