

OIS-000

Organodynamics Reference Architecture (ORA)

Status

Normative

Purpose

This document defines the constitutional architecture of every Organodynamics implementation.

It is the highest normative specification.

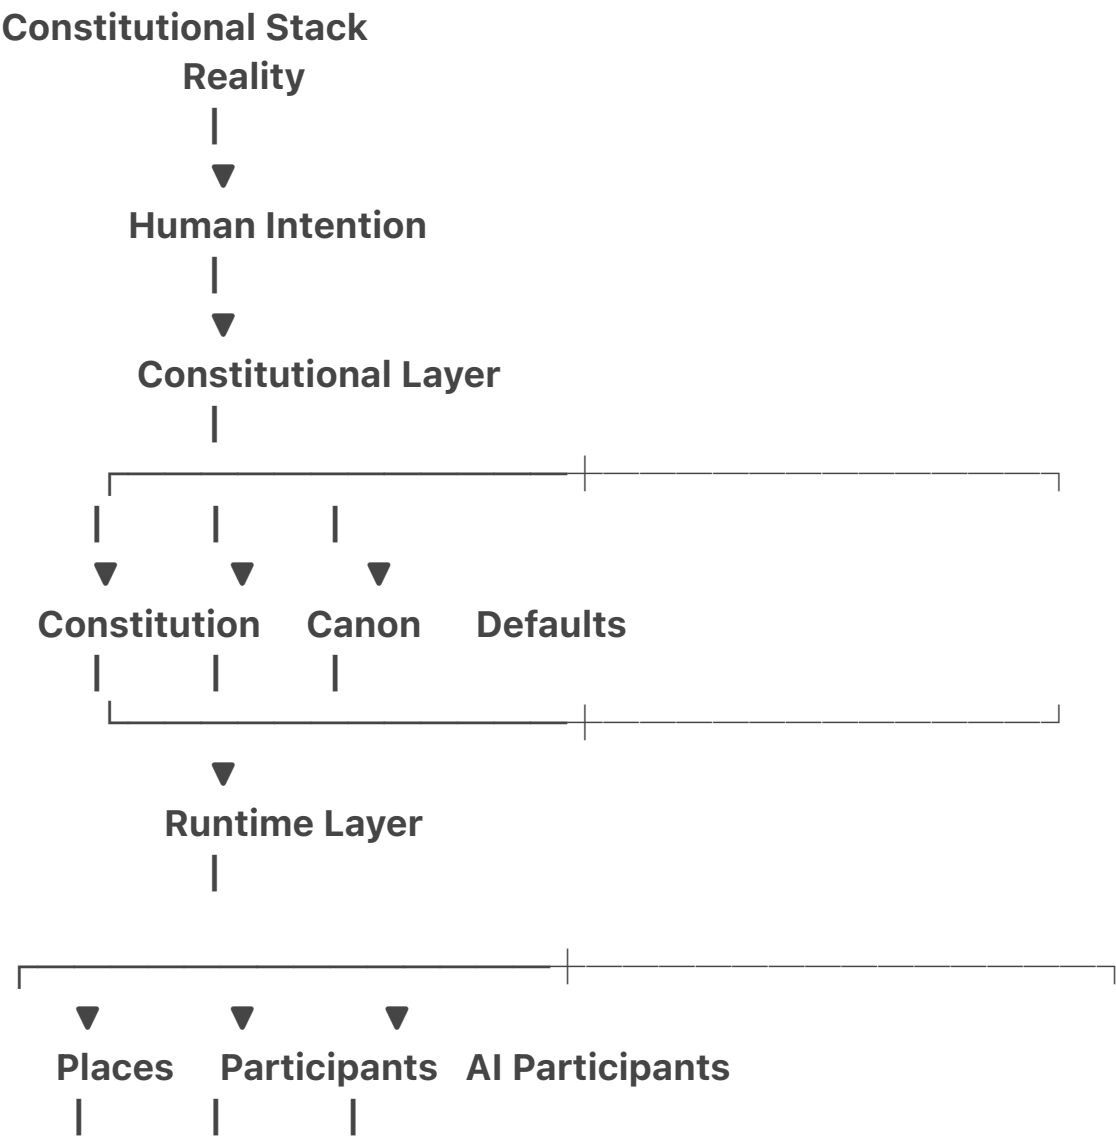

All subsequent specifications SHALL conform to this document.

Architectural Principle

Every implementation SHALL preserve the distinction between constitutional layers.

Implementations MAY optimize internal representation.

Implementations SHALL NOT collapse constitutional boundaries.

Layer Responsibilities

Reality

Outside the implementation.

Reality SHALL NOT be represented as constitutional truth.

Reality is observed.

Never assumed.

Human Intention

Represents the motivation for entering a Place.

Intentions SHALL remain attributable.

Intentions MAY evolve.

Constitution

Defines immutable principles.

Canon

Defines language.

Defaults

Defines adjustable behavior.

Runtime

Implements behavior.

Understanding

Represents the current best constitutional interpretation supported by evidence.

Understanding SHALL remain revisable.

Decisions

Represent actions chosen under current understanding.

Decisions SHALL NOT be interpreted as constitutional truth.

Action

Represents interaction with reality.

Action produces new observations.

Constitutional Feedback Loop Reality

Observation

Contribution

Evidence

Understanding

Decision

Action

Reality

This loop SHALL remain open.

The system SHALL NEVER assume completion.

First Architectural Law

Every implementation SHALL preserve the feedback loop between reality and understanding.

Breaking this loop results in constitutional failure.

Second Architectural Law

Understanding is provisional.

No implementation SHALL represent understanding as immutable truth.

Third Architectural Law

Every constitutional object exists to improve the quality of understanding.

Objects that do not contribute to understanding SHOULD NOT exist.

Fourth Architectural Law

Runtime SHALL remain replaceable.

Meaning SHALL remain reconstructable.

Fifth Architectural Law

Knowledge belongs to Places.

Implementations temporarily host Places.

They do not own them.

Constitutional Boundary

The following SHALL remain implementation-independent:

Meaning

Identity

History

Evidence

Relationships

Lifecycle

The following MAY vary:

UI

Programming Language

Database

Deployment

Networking

Authentication

AI Provider

ואז מגיע מה שאני חושב שהוא הפרק החשוב ביותר בכל התקן.
