

OIS-009

Bootstrap Protocol

1. Purpose

This specification defines the canonical bootstrap sequence for creating the first constitutional Place.

A conforming implementation SHALL be reproducible from an empty environment.

No pre-existing infrastructure SHALL be assumed.

2. Bootstrap Principle

Every Place SHALL be constructible from:

- this Specification
- an empty execution environment
- one Builder

Nothing else is constitutionally required.

3. Bootstrap Order

The Builder SHALL establish the following layers in order.

Constitution

Canon

Identity

Place

Memory

Participant

Contribution

Evidence

Experiment

Library

The order SHALL NOT be reversed unless explicitly permitted by another specification.

4. Stage 1 — Constitution

The Builder SHALL load the constitutional specification.

The Constitution SHALL become read-only before runtime begins.

Runtime SHALL NOT execute without a loaded Constitution.

5. Stage 2 — Canon

The Builder SHALL load the canonical vocabulary.

Every constitutional object SHALL reference canonical definitions.

Undefined concepts SHALL NOT be introduced during runtime.

6. Stage 3 — Identity

The implementation SHALL generate:

Implementation Identifier

Place Identifier

Canonical Version

Builder Metadata

Identity SHALL persist independently of implementation technology.

7. Stage 4 — Place Creation

The Builder SHALL instantiate the first Place.

Minimum required state:

Identity

Constitution

Memory

Lifecycle

No Participant is required at creation.

8. Stage 5 — Memory

Memory SHALL become operational before the first Contribution exists.

The implementation SHALL be capable of reconstructing every constitutional event.

9. Stage 6 — First Participant

The first Participant MAY be:

Human

Artificial

Hybrid

The constitutional model SHALL treat these identically.

10. Stage 7 — First Contribution

The first Contribution SHALL establish constitutional continuity.

Suggested example:

Purpose Statement

Every implementation MAY choose a different first Contribution.

11. Stage 8 — First Evidence

Evidence SHALL exist before the first Default can change.

12. Stage 9 — First Experiment

The first Experiment SHALL demonstrate constitutional learning.

Its purpose is not functionality.

Its purpose is validation.

13. Stage 10 — Public Library Registration

The Place MAY remain private indefinitely.

Registration with a Public Library SHALL remain optional.

Constitutional validity SHALL NOT depend upon publication.

OIS-010

Sovereignty

Principle

Every Place is sovereign.

Definition

A sovereign Place retains constitutional ownership of:

Identity

History

Knowledge

Evidence

Defaults

Relationships

Implementations SHALL NOT own constitutional knowledge.

Hosting providers SHALL NOT own Places.

Repositories SHALL NOT own Places.

Cloud vendors SHALL NOT own Places.

AI providers SHALL NOT own Places.

Builders SHALL NOT own Places after constitutional transfer.

Export

Every sovereign Place SHALL be exportable.

The exported representation SHALL preserve:

Identity

Continuity

Meaning

Relationships

History

Evidence

Lifecycle

Import

Any conforming implementation SHALL reconstruct a sovereign Place from a constitutional export.

OIS-011

Constitutional Serialization

Purpose

Every constitutional object SHALL possess a technology-independent representation.

Serialization SHALL preserve constitutional semantics.

Serialization SHALL NOT depend upon:

JSON

XML

YAML

SQL

Graph databases

Object-oriented languages

Future representations SHALL remain valid.

Required Information

Every serialized object SHALL contain:

Identity

Type

Version

Lifecycle State

Relationships

Canonical References

History

Evidence Links

Interoperability

Two independent implementations SHALL exchange constitutional objects without prior agreement on implementation technology.
