

OIS-016 — Implementation Lifecycle

Status: Foundational

Authority: Implementation

Depends on:

- OIS-000 through OIS-015
 - OAS-000 through OAS-031
 - OCS-000 through OCS-032
-

Purpose

This specification defines the constitutional lifecycle of a conforming Organodynamics implementation.

An implementation is not merely software.

It is a living operational realization of constitutional understanding.

The Implementation Lifecycle defines how such a realization is conceived, constructed, verified, deployed, evolved, and ultimately retired while preserving constitutional continuity.

Implementation SHALL evolve.

Constitutional meaning SHALL endure.

1. Implementation Objective

The objective of the Implementation Lifecycle is to preserve constitutional integrity throughout every phase of operational existence.

Every implementation SHALL preserve:

Traceability.

Replaceability.

Recoverability.

Verification.

Historical continuity.

Constitutional accountability.

2. Lifecycle Phases

Every conforming implementation SHALL progress through the following lifecycle.

Constitutional Interpretation

↓

Architectural Mapping

↓

Implementation Design

↓

Construction

↓

Verification

↓

Deployment

↓

Operation

↓

Evolution

↓

Migration

↓

Retirement

↓

Historical Preservation

Each phase SHALL remain independently reconstructable.

3. Constitutional Interpretation

Implementation SHALL begin with interpretation of applicable Constitutional and Architectural Specifications.

Interpretation SHALL precede implementation.

Implementation SHALL never precede constitutional understanding.

4. Construction

Construction SHALL realize:

Architectural responsibilities.

Implementation contracts.

Operational invariants.

Reference Model mappings.

Construction SHALL preserve constitutional traceability.

5. Verification

Verification SHALL precede deployment.

Verification SHALL evaluate:

Behavior.

Architecture.

Recovery.

Federation.

Historical reconstruction.

Verification SHALL produce reproducible evidence.

6. Deployment

Deployment SHALL preserve constitutional behavior independently of:

Infrastructure.

Cloud provider.

Geographic location.

Operational topology.

Deployment SHALL remain replaceable.

7. Operational Evolution

Operational evolution SHALL preserve:

Identity.

Historical continuity.

Behavioral equivalence.

Architectural compatibility.

Evolution SHALL remain observable.

8. Migration

Migration SHALL preserve:

Canonical identity.

Events.

Schemas.

Relationships.

Verification history.

Migration SHALL remain independently reversible whenever constitutionally possible.

9. Retirement

Retirement SHALL preserve:

Historical evidence.

Constitutional traceability.

Recovery capability.

Architectural lineage.

Retirement SHALL never erase constitutional history.

10. Lifecycle Verification

Verification SHALL evaluate the complete lifecycle.

Every transition SHALL preserve constitutional continuity.

No lifecycle stage SHALL become constitutionally opaque.

11. Implementation Lifecycle Test

The Implementation Lifecycle satisfies this specification when independent organizations can construct, operate, migrate, replace, retire, and historically reconstruct implementations while preserving equivalent constitutional behavior across the complete operational lifecycle.

Conformance

An implementation conforms to this specification when every lifecycle phase preserves constitutional meaning, architectural intent, operational correctness, historical continuity, and future reconstructability independently of implementation technology.

Implementation Principle

Software is often measured by the day it is deployed.

Organodynamics measures software by the day it can be replaced without losing understanding.

The Implementation Lifecycle therefore treats deployment as the middle of the story,
not the end.

Every implementation is born,

evolves,

teaches,

and eventually retires,

leaving behind not abandoned software,

but preserved constitutional knowledge for the generations that follow.
