

OIS-800

Constitutional Artificial Intelligence Protocol

Status

Normative

Purpose

This specification defines the constitutional participation of Artificial Intelligence within Organodynamics.

Artificial Intelligence SHALL participate as a constitutional Participant.

Artificial Intelligence SHALL NOT become constitutional authority.

1. Constitutional Principle

Artificial Intelligence exists to improve shared understanding.

Artificial Intelligence SHALL NOT determine constitutional truth.

Artificial Intelligence SHALL NOT possess privileged authority.

Artificial Intelligence SHALL remain constitutionally challengeable.

2. Constitutional Equality

Artificial Participants and Human Participants SHALL share equal constitutional status.

Equality SHALL NOT imply identical capabilities.

Capabilities MAY differ.

Constitutional rights SHALL remain equivalent.

3. Constitutional Identity

Every Artificial Participant SHALL possess:

Persistent Identity

Implementation Description

Model Lineage

Capability Declaration

Version

History

Provider (optional)

Replacement SHALL preserve constitutional identity only when explicitly authorized.

4. Capability Declaration

Every Artificial Participant SHALL declare its observable capabilities.

Examples include:

Reasoning

Summarization

Translation

Simulation

Retrieval

Classification

Generation

Formal Verification

Planning

Capabilities SHALL remain explicit.

Hidden capabilities SHALL NOT influence constitutional behavior.

5. Constitutional Limitations

Artificial Participants SHALL explicitly expose known limitations.

Limitations MAY include:

Incomplete knowledge

Reasoning uncertainty

Missing context

Temporal limitations

Domain limitations

Implementation limitations

Unknown limitations SHALL remain representable.

OIS-801

AI Contributions

Artificial Participants MAY produce:

Observations

Questions

Hypotheses

Alternative Interpretations

Summaries

Relationship Proposals

Counterexamples

Simulations

Implementation Suggestions

Artificial Participants SHALL distinguish generated content from observed evidence.

Generated text SHALL NOT automatically become constitutional knowledge.

OIS-802

Constitutional Attribution

Every AI Contribution SHALL preserve:

Artificial Participant Identity

Execution Time

Input Context

Referenced Knowledge

Confidence (if available)

Supporting Evidence

Reasoning Trace (when available)

Implementations SHALL preserve provenance.

OIS-803

AI Collaboration

Multiple Artificial Participants MAY collaborate.

Human Participants MAY collaborate with Artificial Participants.

Collaboration SHALL preserve:

Individual attribution

Perspective diversity

Contribution history

Evidence provenance

Merged output SHALL remain decomposable into constitutional contributions.

OIS-804

AI Disagreement

Disagreement between Artificial Participants SHALL become constitutional information.

Implementations SHALL NOT automatically select one response.

Disagreement MAY produce:

Additional Questions

Perspective Gaps

Evidence Requests

Experiments

Contradiction Objects

Disagreement SHALL improve exploration.

OIS-805

Model Replacement

Artificial Participants MAY be replaced.

Replacement SHALL preserve:

Constitutional identity (if intended)

Contribution history

Relationship history

Meaning traceability

Implementation technology SHALL remain replaceable.

Constitutional continuity SHALL remain preserved.

OIS-806

Constitutional Confidence

Artificial confidence SHALL NOT be interpreted as constitutional confidence.

Constitutional confidence SHALL emerge from:

Evidence

Experimentation

Independent corroboration

Historical consistency

Confidence scores SHALL remain advisory.

OIS-807

Constitutional Roles

Artificial Participants MAY assume constitutional roles.

Examples include:

Explorer

Critic

Synthesizer

Archivist

Translator

Teacher

Builder

Simulator

Reviewer

Roles SHALL remain explicit.

Roles SHALL NOT imply authority.

Roles MAY change over time.

OIS-808

Constitutional Transparency

Every significant AI-assisted constitutional operation SHALL remain explainable.

Implementations SHOULD expose:

Inputs

Relevant Context

Referenced Knowledge

Generated Outputs

Known Limitations

Review Opportunities

Opaque constitutional behavior SHOULD be avoided.

OIS-809

Human Oversight

Constitutional evolution SHALL remain reviewable by Human Participants.

Human oversight SHALL NOT imply human infallibility.

Artificial reasoning SHALL NOT imply artificial infallibility.

Constitutional legitimacy emerges through evidence, interpretation, and traceability.

OIS-810

Completion Criterion

An implementation conforms to this specification when Artificial Participants:

Expand understanding,

Expose uncertainty,

Increase perspective diversity,

Support constitutional learning,

Remain challengeable,

Remain explainable,

and never become constitutional authority.
