Abstract Constitutional Model

Status

Foundational

Normative

Purpose

This specification defines the abstract computational model shared by every constitutional object.

Every constitutional object SHALL conform to this specification.

No constitutional object SHALL define behavior that contradicts this model.

Abstract Constitutional Object

Every constitutional object is defined by the following abstract structure.

```
ConstitutionalObject {  
  
    Identity  
  
    Type  
  
    Lifecycle  
  
    Meaning  
  
    Context  
  
    Relationships  
  
    History  
  
    Evidence  
}
```

```
Metadata
```

```
}
```

Implementations MAY represent these fields differently.

Implementations SHALL preserve their constitutional semantics.

Identity

Identity SHALL exist exactly once.

Identity SHALL remain immutable.

Identity SHALL survive migration.

Type

Type identifies constitutional behavior.

Type SHALL remain explicit.

Type MAY evolve only through constitutional evolution.

Lifecycle

Every constitutional object SHALL expose lifecycle state.

Lifecycle SHALL remain observable.

Lifecycle transitions SHALL occur only through constitutional Events.

Meaning

Meaning SHALL remain reconstructable.

Meaning SHALL remain independent of representation.

Context

Context SHALL describe the constitutional environment required for interpretation.

Context SHALL remain historically reconstructable.

Relationships

Relationships SHALL remain first-class constitutional objects.

Relationships SHALL possess identity.

Relationships SHALL remain independently referenceable.

History

History SHALL preserve every constitutional transition.

History SHALL remain append-preserving.

Evidence

Evidence SHALL support interpretation.

Evidence SHALL never overwrite history.

Metadata

Metadata SHALL remain implementation-independent.

Metadata SHALL never modify constitutional meaning.

Abstract Operations

Every constitutional object SHALL support the following abstract operations.

Create

Read

Interpret

Relate

Version

Archive

Restore

Reference

Explain

Validate

These operations define constitutional semantics.

Implementations MAY expose different APIs.

Constitutional Events

Every constitutional operation SHALL produce an Event.

Events SHALL remain immutable.

Events SHALL remain replayable.

Constitutional References

Every constitutional reference SHALL reference Identity.

References SHALL NOT depend upon storage location.

References SHALL survive migration.

Abstract Invariants

Every constitutional object SHALL satisfy:

Identity remains stable.

Meaning remains reconstructable.

History remains complete.

Relationships remain explainable.

Evidence remains attributable.

Lifecycle remains observable.

Constitutional Equivalence

Two constitutional objects SHALL be equivalent when:

Identity semantics are equivalent.

Meaning semantics are equivalent.

Lifecycle semantics are equivalent.

Relationship semantics are equivalent.

Historical semantics are equivalent.

Representation SHALL NOT determine constitutional equivalence.
