

OAS-004 — Place Architecture

Status: Foundational

Authority: Architectural

Depends on:

- OAS-000
 - OAS-001
 - OAS-002
 - OAS-003
 - OCS-000 through OCS-032
-

Purpose

This specification defines the architectural organization of a Constitutional Place.

The Constitution defines **what a Place is**.

This specification defines **how a Place is architecturally organized**.

A Place is not an application screen.

A Place is not a database.

A Place is the primary architectural boundary within which constitutional understanding evolves.

Every implementation of Organodynamics SHALL be organized around Places.

1. Architectural Objective

A Place SHALL serve as the smallest sovereign architectural environment capable of preserving constitutional continuity.

Every architectural decision concerning a Place SHALL strengthen:

Continuity.

Context.

Participation.

Memory.

Understanding.

2. Architectural Boundary

Every Place SHALL possess an explicit architectural boundary.

The boundary SHALL define:

Purpose.

Identity.

Applicable Constitution.

Applicable Canon.

Membership.

Relationships.

Historical continuity.

Everything inside the boundary belongs to the constitutional evolution of the Place.

3. Internal Organization

A Place SHALL organize constitutional constructs rather than implementation objects.

Typical constitutional constructs include:

Participants.

Questions.

Evidence.

Experiments.

Explanations.

Understanding.

Decisions.

Actions.

Libraries.

The architecture SHALL remain open to future construct types.

4. Architectural Sovereignty

A Place SHALL remain architecturally sovereign.

Sovereignty SHALL include:

Independent memory.

Independent evolution.

Independent participation.

Independent architectural composition.

No external implementation SHALL own the Place.

5. Architectural Memory

Memory SHALL belong to the Place.

Participants MAY leave.

Implementations MAY change.

The Place SHALL remember.

Architectural memory SHALL preserve constitutional continuity independently of active participation.

6. Architectural Climate

A Place SHALL expose its current constitutional climate.

Architecture SHALL support representation of:

Current investigations.

Current uncertainty.

Current understanding.

Current activity.

Architectural climate SHALL remain observational.

It SHALL NOT modify constitutional meaning.

7. Architectural Composition

A Place MAY contain sub-Places.

Sub-Places SHALL preserve:

Independent purpose.

Independent history.

Independent sovereignty.

Architectural composition SHALL preserve recursive organization.

8. Architectural Federation

Places MAY federate.

Federation SHALL preserve:

Local autonomy.

Local memory.

Local identity.

Shared constitutional understanding.

Architecture SHALL avoid centralized dependency.

9. Architectural Interfaces

Every Place SHALL expose architectural interfaces.

Interfaces SHALL permit:

Participation.

Contribution.

Discovery.

Federation.

Observation.

Learning.

Interfaces SHALL expose constitutional behavior rather than implementation details.

10. Architectural Growth

Places SHALL support continuous architectural growth.

Growth MAY include:

Additional Participants.

Additional Knowledge.

Additional Places.

Additional Libraries.

Additional constitutional constructs.

Growth SHALL preserve architectural coherence.

11. Architectural Migration

A Place SHALL remain migratable.

Migration SHALL preserve:

Identity.

History.

Relationships.

Memory.

Participation history.

Migration SHALL remain constitutionally lossless.

12. Architectural Recovery

A Place SHALL be reconstructable using:

Its constitutional identity.

Its constitutional history.

Its constitutional relationships.

Its architectural specification.

Its constitutional memory.

No implementation-specific knowledge SHALL be required.

13. Architectural Pattern

Every Place SHALL behave as a constitutional organism rather than a software container.

Architectural organization SHALL emerge from constitutional relationships.

Not from implementation convenience.

14. Architectural Verification

Verification SHALL demonstrate that independent implementations preserve equivalent Place behavior despite different implementation technologies.

Equivalent architecture SHALL be evaluated through constitutional continuity.

Not structural similarity.

15. Architectural Place Test

A Place Architecture satisfies this specification when an independent architect can reconstruct:

Why the Place exists.

What constitutional purpose it serves.

How it preserves understanding.

How it evolves.

How it federates.

How it survives implementation replacement.

If any answer cannot be reconstructed,

the Place Architecture is incomplete.

Conformance

An implementation conforms to this specification when every Place behaves as an independent constitutional environment capable of preserving identity, memory, participation, and understanding independently of implementation technology.

Architectural Principle

Applications organize features.

Platforms organize services.

Organodynamics organizes Places.

A Place is where constitutional life occurs.

Architecture therefore begins not with screens,

not with databases,

and not with software modules,

but with the Place in which understanding becomes capable of living beyond the people and systems that temporarily inhabit it.
