

OAS-011 — Schema Architecture

Status: Foundational

Authority: Architectural

Depends on:

- OAS-000 through OAS-010
 - OCS-000 through OCS-032
-

Purpose

This specification defines the architectural role of the Schema.

The Schema is the living architectural blueprint through which a Place understands itself.

It is neither a database schema,

nor a software schema,

nor a data model.

The Schema is the continuously evolving constitutional organization of meaning.

Every Place SHALL possess its own Schema.

The federation of Schemas forms the living architecture of Organodynamics.

1. Architectural Objective

The objective of Schema Architecture is to ensure that every Place can describe itself, understand itself, explain itself, and evolve itself without losing constitutional continuity.

A Schema SHALL make understanding visible.

2. Definition

A Schema is the architectural organization of constitutional meaning within a Place.

A Schema SHALL preserve:

Identity.

Purpose.

Relationships.

Patterns.

Boundaries.

Historical evolution.

A Schema SHALL remain reconstructable independently of implementation.

3. Schema Independence

A Schema SHALL remain independent of:

Database schemas.

Programming languages.

Storage technologies.

API definitions.

User interfaces.

Implementation models MAY instantiate a Schema.

They SHALL NOT define it.

4. Schema Composition

Every Schema SHALL organize constitutional constructs.

Typical constructs include:

Places.

Voices.

Participants.

Libraries.

Questions.

Evidence.

Events.

Understanding.

Architectural Patterns.

Future constitutional constructs SHALL integrate without redefining the Schema.

5. Schema Evolution

Schemas SHALL evolve continuously.

Evolution SHALL preserve:

Identity.

Meaning.

Historical lineage.

Architectural continuity.

Every Schema revision SHALL become constitutional history.

6. Schema Relationships

Schemas MAY reference:

Other Schemas.

Shared Libraries.

Architectural Patterns.

Canonical Definitions.

Constitutional Specifications.

Relationships SHALL remain explicit.

7. Schema Reflection

Every Schema SHALL remain capable of describing itself.

Self-description SHALL expose:

Purpose.

Current organization.

Known limitations.

Historical evolution.

Future directions.

Architecture SHALL remain self-explainable.

8. Schema Federation

Independent Schemas MAY federate.

Federation SHALL preserve:

Local sovereignty.

Independent evolution.

Shared meaning.

Relationship integrity.

Federation SHALL expand architectural understanding.

It SHALL NOT erase local identity.

9. Schema Memory

Every Schema SHALL preserve:

Architectural decisions.

Pattern evolution.

Relationship history.

Organizational changes.

Semantic continuity.

Schema Memory SHALL survive implementation replacement.

10. Schema Discovery

Schemas SHALL support architectural discovery.

Discovery SHALL emerge from:

Relationships.

Patterns.

Historical evolution.

Architectural comparisons.

Discovery SHALL improve future architecture.

11. Schema Verification

Verification SHALL demonstrate:

Architectural consistency.

Semantic preservation.

Historical continuity.

Independent reconstructability.

Federation compatibility.

Equivalent implementations SHALL NOT be required.

Equivalent Schemas SHALL.

12. Schema Pattern

Architecture SHALL organize around living Schemas rather than static structural definitions.

Structure SHALL emerge from constitutional meaning.

Meaning SHALL not emerge from structure.

13. Schema Architecture Test

Schema Architecture satisfies this specification when an independent architect can reconstruct:

Why a Place is organized as it is.

How its organization evolved.

How architectural meaning is preserved.

How federation occurs.

How future evolution remains possible.

If any answer cannot be reconstructed,

the Schema Architecture is incomplete.

Conformance

An implementation conforms to this specification when every Place possesses a living Schema that preserves architectural identity, constitutional meaning, historical continuity, and future evolvability independently of implementation technology.

Architectural Principle

Buildings are constructed from blueprints.

Software is constructed from designs.

Organodynamics grows from living Schemas.

A Schema is not the plan of a Place.

It is the Place's evolving understanding of itself.

As understanding deepens,

the Schema deepens.

As the Schema deepens,

the Place becomes capable of understanding not only the world around it,

but also the architecture through which it continues to evolve.
