

OCS-005 — Constitutional Ontology

Status: Foundational

Authority: Constitutional

Depends on:

- OCS-000 — Constitutional Alphabet
 - OCS-001 — Constitutional Grammar
 - OCS-002 — Constitutional Logic
 - OCS-003 — Constitutional Mathematics
 - OCS-004 — Constitutional Semantics
-

Purpose

This specification defines the constitutional ontology of Organodynamics.

The ontology defines what kinds of constitutional existence are permitted.

It does not define implementation.

It does not define storage.

It does not define software architecture.

It defines the categories of existence from which every constitutional construct SHALL derive.

1. Constitutional Ontology

Every constitutional construct SHALL belong to exactly one primary ontological category.

Additional roles MAY exist.

Primary ontological category SHALL remain explicit.

2. Ontological Categories

Organodynamics recognizes the following constitutional categories.

Existence

Actor

Structure

Process

Knowledge

Relationship

State

Meaning

These categories SHALL remain implementation-independent.

3. Existence

Definition

Existence represents anything constitutionally recognizable.

Existence SHALL possess:

Identity

Context

Continuity

Existence SHALL NOT imply activity.

Existence SHALL NOT imply importance.

Existence precedes every other ontological category.

4. Actor

Definition

An Actor is an Existence capable of intentional constitutional participation.

Actors MAY include:

Human beings

Artificial participants

Organizations

Future constitutional entities

Actors SHALL possess agency.

Agency SHALL remain observable.

5. Structure

Definition

A Structure organizes constitutional meaning.

Examples include:

Place

Library

Canon

Collection

Framework

Hierarchy

Graph

Structures SHALL organize.

Structures SHALL NOT determine constitutional truth.

6. Process

Definition

A Process represents constitutional change over time.

Examples include:

Experiment

Learning

Review

Synchronization

Evolution

Migration

Processes SHALL consist of constitutional Events.

Processes SHALL remain replayable.

7. Knowledge

Definition

Knowledge represents constitutionally justified understanding.

Knowledge SHALL remain:

Explainable

Traceable

Evidence-supported

Historically reconstructable

Knowledge SHALL remain provisional.

8. Relationship

Definition

Relationships express constitutional meaning between constitutional entities.

Relationships SHALL themselves be constitutional entities.

Relationships SHALL possess:

Identity

History

Meaning

Context

Relationships SHALL remain independently referenceable.

9. State

Definition

State represents the constitutional condition of an entity at a specific constitutional moment.

State SHALL remain:

Observable

Reconstructable

Historically attributable

States SHALL evolve only through constitutional Events.

10. Meaning

Definition

Meaning is the constitutional interpretation emerging from the interaction of all other ontological categories.

Meaning SHALL NOT exist independently of constitutional context.

Meaning SHALL remain reconstructable.

11. Ontological Independence

No ontological category SHALL be reducible to another.

For example:

Knowledge SHALL NOT be reduced to Data.

Actor SHALL NOT be reduced to Identity.

Relationship SHALL NOT be reduced to Reference.

Meaning SHALL NOT be reduced to Representation.

Implementations MAY optimize representation.

Implementations SHALL preserve ontological distinction.

12. Ontological Composition

Complex constitutional constructs SHALL be compositions of ontological categories.

Example:

Place

=

Structure

+

Relationships

+

State

+

Meaning

+

Continuity

Example:

Experiment

=

Process

+

Knowledge

+

Relationships

+

Meaning

13. Ontological Evolution

Ontological categories SHALL remain stable.

New constitutional constructs MAY emerge.

New ontological categories SHALL require constitutional evolution.

The ontology SHALL evolve rarely.

Constructs SHALL evolve frequently.

14. Ontological Integrity

Ontological Integrity SHALL require:

Correct categorization

Explicit relationships

Historical continuity

Semantic preservation

Identity preservation

Violation of ontological integrity SHALL invalidate constitutional interpretation.

15. Ontological Minimality

The ontology SHALL define only the categories required to express constitutional reality.

No category SHALL exist without constitutional necessity.

If two categories become constitutionally indistinguishable,

constitutional review SHALL be initiated.

16. Ontological Completeness

The ontology SHALL be considered complete when every constitutional construct defined by Organodynamics can be expressed as a composition of one or more ontological categories without introducing additional primitive concepts.

Conformance

An implementation conforms to this specification if every constitutional construct is mapped to explicit ontological categories while preserving constitutional meaning independently of implementation technology.

Constitutional Principle

Ontology defines what may exist.

Semantics defines what it means.

Logic defines how it is understood.

Mathematics defines how it is represented.

Together they form the constitutional foundation upon which every future Organodynamics specification is built.
