

ODM-024 — Discovery Lifecycle Reference Model

Status: Foundational

Authority: Methodology

Depends on:

- ODM-000 through ODM-023
 - OCS-000 through OCS-032
 - OAS-000 through OAS-031
 - OIS-000 through OIS-019
 - OGD-000 through OGD-023
-

Purpose

This specification defines the canonical reference model for the complete Discovery Lifecycle within the Organodynamics discipline.

The preceding specifications define individual methodological processes.

This specification defines their constitutional relationship as one coherent system.

The Discovery Lifecycle SHALL be understood as an integrated process rather than a sequence of isolated activities.

1. Objective

The objective of the Discovery Lifecycle Reference Model is to provide a single constitutional representation of how understanding progresses from initial observation to enduring constitutional knowledge and continues through ongoing reassessment.

The model SHALL preserve:

Continuity.

Traceability.

Methodological coherence.

Historical accountability.

Future extensibility.

2. Lifecycle Overview

The canonical Discovery Lifecycle consists of the following constitutional phases:

Methodological Learning, Managed Uncertainty, Error Patterns, Discovery Portfolio, Research Diversity, Research Prioritization, Methodological Health, and Methodological Integrity operate continuously across every phase of the lifecycle.

3. Lifecycle Characteristics

The Discovery Lifecycle SHALL be:

Iterative.

Evidence-driven.

Historically traceable.

Constitutionally accountable.

Self-correcting.

No phase SHALL be considered permanently final.

Every phase MAY inform previous phases through documented methodological feedback.

4. Cross-Cutting Processes

The following specifications are constitutional cross-cutting concerns:

Methodological Learning.

Managed Uncertainty.

Error Patterns.

Discovery Portfolio.

Research Prioritization.

Research Diversity.

Methodological Health.

Methodological Integrity.

These processes SHALL influence the entire lifecycle rather than a single stage.

5. Constitutional Relationships

The Discovery Lifecycle SHALL remain compatible with:

The Constitutional Specification (OCS).

The Architectural Specification (OAS).

The Implementation Specification (OIS).

The Organodynamics Glossary (OGD).

Discovery produces proposals.

Governance evaluates them.

Integration incorporates them.

Reassessment renews them.

6. Historical Continuity

Every execution of the Discovery Lifecycle SHALL preserve:

Observations.

Reasoning.

Evidence.

Review.

Integration.

Subsequent reassessment.

The complete history of discovery SHALL remain reconstructable.

7. Verification

Verification SHALL demonstrate:

Lifecycle completeness.

Process traceability.

Cross-specification consistency.

Historical continuity.

Independent reproducibility.

The lifecycle SHALL remain understandable as a single constitutional system.

8. Discovery Lifecycle Test

The Discovery Lifecycle Reference Model satisfies this specification when independent researchers consistently reconstruct substantially equivalent methodological pathways from initial observation to constitutional integration while preserving the same constitutional understanding of every lifecycle phase and its relationships.

9. Conformance

The Organodynamics Discovery Methodology conforms to this specification when every methodological activity can be located within the canonical Discovery Lifecycle, every transition remains explicitly documented, every constitutional decision remains historically attributable, and the complete lifecycle remains independently reproducible and continuously improvable.

Methodological Principle

A discovery is not an event.

It is a journey.

Its value lies not only in where it ends,

but in the transparency of every step that brought it there.

The Organodynamics Discovery Lifecycle therefore preserves the complete constitutional journey of understanding—

from the first observation,

through disciplined inquiry,
to constitutional knowledge,
and onward to the next generation of questions.
In Organodynamics,
every answer becomes the beginning of another discovery.
