

OGD-006 — Conceptual Necessity

Status: Foundational

Authority: Terminology

Depends on:

- OGD-000 through OGD-005
 - OCS-000 through OCS-032
 - OAS-000 through OAS-031
 - OIS-000 through OIS-019
-

Purpose

This specification defines the principle of Conceptual Necessity.

Every canonical concept introduced into the Organodynamics corpus SHALL justify its own existence.

Concepts SHALL not be introduced because they are fashionable.

They SHALL not be introduced because they are convenient.

They SHALL be introduced only because constitutional understanding cannot be adequately expressed without them.

Conceptual growth SHALL follow necessity.

Not accumulation.

1. Objective

The objective of Conceptual Necessity is to preserve a vocabulary that remains precise, minimal, expressive, and constitutionally complete.

Every canonical concept SHALL strengthen the language of the discipline.

No concept SHALL exist without demonstrable constitutional purpose.

2. Definition

A concept demonstrates Conceptual Necessity when its absence would diminish the ability of the Organodynamics corpus to describe, organize, explain, or preserve constitutional understanding.

If an existing concept already fulfills the same constitutional role,
a new concept SHALL NOT be introduced.

3. Criteria for Admission

A proposed canonical concept SHALL demonstrate:

Semantic uniqueness.

Constitutional relevance.

Architectural applicability.

Implementation neutrality.

Long-term stability.

Independent usefulness.

Failure to satisfy any criterion SHALL require further constitutional justification.

4. Redundancy

Redundant concepts SHALL be avoided.

Semantic overlap SHALL be minimized.

Where overlap exists,

the distinction SHALL be explicitly documented.

Vocabulary expansion SHALL remain disciplined.

5. Evolution

Conceptual Necessity MAY change as the discipline evolves.

A concept MAY become:

More fundamental.

Less fundamental.

Deprecated.

Replaced.

Historical conceptual lineage SHALL remain preserved.

6. Relationship to Existing Concepts

Every new concept SHALL identify:

Its closest related concepts.

Its distinguishing characteristics.

Its constitutional contribution.

Its semantic boundaries.

Concepts SHALL strengthen the network of understanding.

7. Verification

Verification SHALL evaluate:

Necessity.

Uniqueness.

Conceptual coherence.

Terminological compatibility.

Historical continuity.

Independent interpretability.

Conceptual necessity SHALL remain demonstrable.

8. Conceptual Necessity Test

Conceptual Necessity satisfies this specification when independent constitutional reviewers consistently conclude that removing a canonical concept would reduce the expressive power, precision, or explanatory capability of the Organodynamics corpus.

Conformance

The Organodynamics Glossary conforms to this specification when every canonical concept demonstrates constitutional necessity, semantic uniqueness, historical continuity, explicit relationships, and independently verifiable conceptual value.

Terminological Principle

Languages become weaker when words multiply faster than understanding.

Disciplines become stronger when every concept earns its place.

The Organodynamics vocabulary therefore grows only through demonstrated necessity,

ensuring that each new concept expands the discipline's ability to think,

rather than merely increasing the number of names available to describe it.
