

OGD-007 — Canonical Naming

Status: Foundational

Authority: Terminology

Depends on:

- OGD-000 through OGD-006
 - OCS-000 through OCS-032
 - OAS-000 through OAS-031
 - OIS-000 through OIS-019
-

Purpose

This specification defines the constitutional principles governing canonical naming throughout the Organodynamics corpus.

Names are not labels.

Names are stable references through which constitutional concepts become identifiable, discussable, and historically traceable.

A canonical name SHALL maximize precision.

It SHALL minimize ambiguity.

Naming SHALL serve constitutional understanding rather than stylistic preference.

1. Objective

The objective of Canonical Naming is to establish a durable and internally consistent naming system capable of remaining stable across generations of specifications, implementations, translations, and educational material.

Names SHALL support understanding.

They SHALL not compete for attention.

2. Canonical Designation

Every canonical concept SHALL possess one preferred canonical designation.

The canonical designation SHALL be used consistently across:

Specifications.

Reference models.

Reference implementations.

Methodological documents.

Educational material.

Machine-readable representations.

Alternative expressions MAY exist.

They SHALL reference the canonical designation.

3. Naming Principles

Canonical names SHOULD be:

Precise.

Stable.

Descriptive.

Implementation-neutral.

Technology-independent.

Conceptually focused.

Names SHOULD avoid:

Marketing language.

Temporal references.

Vendor-specific terminology.

Implementation details.

Ambiguous abbreviations.

4. Abbreviations

Canonical abbreviations MAY be assigned.

Abbreviations SHALL:

Remain unique.

Be explicitly defined.

Reference the canonical designation.

Never replace the canonical designation in normative definitions.

5. Cross-Language Naming

Canonical designations SHALL remain language-independent.

Translations MAY introduce localized expressions.

Localized expressions SHALL preserve reference to the canonical designation and identifier.

Meaning SHALL take precedence over literal translation.

6. Renaming

Canonical names MAY be revised only through constitutional terminology governance.

Renaming SHALL preserve:

Historical names.

Migration guidance.

Specification references.

Canonical identifiers.

Renaming SHALL never obscure historical literature.

7. Verification

Verification SHALL evaluate:

Naming consistency.

Identifier consistency.

Cross-reference integrity.

Terminological uniqueness.

Historical continuity.

Machine interpretability.

8. Canonical Naming Test

Canonical Naming satisfies this specification when independent readers, educators, implementers, translators, and automated systems consistently identify the same constitutional concept from its canonical designation regardless of language, publication date, or implementation context.

Conformance

The Organodynamics corpus conforms to this specification when every canonical concept possesses a stable designation, unique identity, explicit historical lineage, and terminology that remains precise, consistent, and independently interpretable across all normative and educational materials.

Terminological Principle

A definition explains what a concept means.

A name determines whether generations can continue talking about it without confusion.

The Organodynamics naming system therefore treats names not as decoration,
but as constitutional infrastructure.

A good name does not merely identify an idea.

It preserves the discipline's ability to recognize that idea long after its original authors are gone.
