

OGD-008 — Conceptual Grammar

Status: Foundational

Authority: Terminology

Depends on:

- OGD-000 through OGD-007
 - OCS-000 through OCS-032
 - OAS-000 through OAS-031
 - OIS-000 through OIS-019
-

Purpose

This specification defines the Conceptual Grammar of the Organodynamics language.

Definitions identify concepts.

Grammar governs how concepts may be meaningfully related.

Without grammar,

concepts become isolated.

Without relationships,

constitutional understanding cannot emerge.

The Conceptual Grammar therefore establishes the canonical relationship language of the Organodynamics corpus.

1. Objective

The objective of the Conceptual Grammar is to ensure that canonical concepts combine into constitutionally meaningful statements.

Grammar SHALL preserve semantic consistency.

Grammar SHALL prevent arbitrary conceptual composition.

2. Definition

Conceptual Grammar is the constitutional system governing valid semantic relationships among canonical concepts.

Grammar SHALL define:

Relationship categories.

Permitted compositions.

Relationship semantics.

Relationship constraints.

Relationship evolution.

3. Canonical Relationship Types

Canonical relationship types MAY include:

Contains.

Participates In.

Produces.

Depends Upon.

Constrains.

Extends.

Implements.

Observes.

Preserves.

Generates.

Influences.

References.

Specializes.

Generalizes.

Additional relationship types MAY be introduced through constitutional revision.

4. Relationship Semantics

Every canonical relationship SHALL possess:

Normative meaning.

Applicable concept categories.

Directionality.

Constitutional implications.

Historical continuity.

Relationships SHALL remain independently referenceable.

5. Relationship Constraints

Grammar SHALL identify invalid conceptual compositions.

Relationships SHALL respect:

Concept taxonomy.

Constitutional meaning.

Architectural boundaries.

Implementation neutrality.

Invalid grammar SHALL remain explicitly detectable.

6. Evolution

The Conceptual Grammar MAY evolve.

Evolution SHALL preserve:

Historical relationships.

Compatibility guidance.

Relationship lineage.

Semantic continuity.

Grammar SHALL remain reconstructable.

7. Machine Interpretability

The Conceptual Grammar SHOULD remain machine interpretable.

Machine representations SHALL preserve:

Canonical relationship identifiers.

Directionality.

Constraints.

Historical applicability.

Machines SHALL interpret.

They SHALL not redefine.

8. Verification

Verification SHALL evaluate:

Relationship correctness.

Semantic consistency.

Constraint preservation.

Taxonomy compatibility.

Historical continuity.

Machine interpretability.

9. Conceptual Grammar Test

The Conceptual Grammar satisfies this specification when independent readers and independent automated systems consistently derive equivalent constitutional meaning from the same network of canonical concepts and relationships.

Conformance

The Organodynamics corpus conforms to this specification when every canonical relationship preserves explicit semantics, constitutional compatibility, historical continuity, grammatical validity, and independently reconstructable meaning.

Terminological Principle

Vocabulary makes ideas possible.

Grammar makes ideas intelligible.

The Organodynamics language therefore preserves not only the meaning of its concepts,

but also the lawful ways in which those concepts may relate,

ensuring that future generations inherit not merely a dictionary,

but an executable language of constitutional understanding.
