

OGD-011 — Concept Quality

Status: Foundational

Authority: Terminology

Depends on:

- OGD-000 through OGD-010
 - OCS-000 through OCS-032
 - OAS-000 through OAS-031
 - OIS-000 through OIS-019
-

Purpose

This specification defines the constitutional criteria for evaluating the quality of canonical concepts within the Organodynamics corpus.

Conceptual quality is not determined by popularity, frequency of use, or rhetorical elegance.

A high-quality concept strengthens the discipline's ability to observe, describe, organize, reason about, and evolve constitutional understanding.

Concept Quality SHALL be evaluated constitutionally.

It SHALL not be evaluated stylistically.

1. Objective

The objective of Concept Quality is to establish stable, implementation-independent criteria for assessing the long-term value of canonical concepts.

Every canonical concept SHOULD improve:

Precision.

Expressiveness.

Coherence.

Reusability.

Explainability.

Conceptual economy.

2. Definition

A concept demonstrates quality when it increases the explanatory power of the Organodynamics corpus without introducing unnecessary ambiguity, redundancy, or conceptual fragmentation.

Quality SHALL emerge through constitutional usefulness.

Not linguistic sophistication.

3. Quality Dimensions

Conceptual quality SHALL be evaluated through multiple dimensions, including:

Semantic precision.

Constitutional necessity.

Relationship richness.

Taxonomic coherence.

Historical continuity.

Implementation neutrality.

Educational clarity.

Independent interpretability.

No single dimension SHALL determine overall quality.

4. Conceptual Economy

High-quality concepts SHALL maximize expressive capability while minimizing unnecessary conceptual complexity.

Concept proliferation SHALL be discouraged.

Concept reuse SHALL be encouraged where constitutionally appropriate.

5. Relationship Quality

A high-quality concept SHALL integrate coherently into the semantic network.

It SHALL possess:

Clear boundaries.

Meaningful relationships.

Consistent grammar.

Appropriate authority.

Observable lineage.

An isolated concept SHOULD be reconsidered.

6. Evolution Quality

Conceptual quality SHALL remain observable throughout the concept lifecycle.

Revision SHOULD improve:

Precision.

Compatibility.

Interpretability.

Historical continuity.

Conceptual maturity SHALL remain visible.

7. Verification

Verification SHALL evaluate:

Semantic precision.

Taxonomic consistency.

Relationship integrity.

Historical coherence.

Educational usefulness.

Independent reproducibility.

Concept Quality SHALL remain demonstrable.

8. Concept Quality Test

Concept Quality satisfies this specification when independent reviewers consistently conclude that a canonical concept increases the explanatory power, precision, coherence, and long-term stability of the Organodynamics corpus without creating unnecessary conceptual complexity.

Conformance

The Organodynamics Glossary conforms to this specification when every canonical concept demonstrates measurable conceptual quality through constitutional necessity, semantic precision, coherent relationships, historical continuity, and independently verifiable explanatory value.

Terminological Principle

A concept is not valuable because it has a definition.

It is valuable because it enables understanding that was previously impossible,

or makes existing understanding clearer,

more coherent,

and more durable.

Conceptual quality is therefore measured not by the elegance of a word,

but by the depth of understanding it permanently adds to the discipline.
