

OGD-016 — Semantic Health

Status: Foundational

Authority: Terminology

Depends on:

- OGD-000 through OGD-015
 - OCS-000 through OCS-032
 - OAS-000 through OAS-031
 - OIS-000 through OIS-019
-

Purpose

This specification defines the constitutional principles governing the semantic health of the Organodynamics corpus.

A discipline may possess correct definitions while gradually losing semantic coherence.

Semantic Health provides the criteria through which the vocabulary of the discipline remains complete, coherent, discoverable, and internally consistent over time.

Health SHALL describe the condition of the semantic ecosystem.

It SHALL not evaluate individual concepts alone.

1. Objective

The objective of Semantic Health is to preserve the long-term vitality of the Organodynamics semantic system.

Semantic Health SHALL promote:

Completeness.

Consistency.

Coherence.

Discoverability.

Conceptual balance.

Evolutionary resilience.

2. Definition

Semantic Health is the observable condition in which the complete network of canonical concepts continues to support accurate constitutional understanding without unnecessary ambiguity, redundancy, fragmentation, or semantic isolation.

Health SHALL emerge from the ecosystem.

Not merely from individual entries.

3. Indicators

Semantic Health MAY be evaluated through indicators including:

Concept connectivity.

Relationship density.

Terminological consistency.

Discovery coverage.

Conceptual redundancy.

Unresolved ambiguity.

Taxonomic completeness.

Reference integrity.

Historical continuity.

Indicators SHALL remain independently measurable.

4. Semantic Gaps

The semantic system SHOULD identify potential gaps.

Examples include:

Missing foundational concepts.

Missing relationships.

Incomplete taxonomies.

Unexplained terminology.

Disconnected knowledge clusters.

Gap identification SHALL remain observable.

5. Semantic Refactoring

Semantic Health MAY recommend:

Concept consolidation.

Concept separation.

Relationship refinement.

Terminological clarification.

Taxonomic improvement.

Refactoring SHALL preserve historical continuity.

6. Continuous Monitoring

Semantic Health SHOULD be periodically evaluated.

Evaluation SHALL preserve:

Historical measurements.

Observed trends.

Applicable specifications.

Improvement history.

Health SHALL become constitutional history.

7. Machine Assessment

Machine-assisted assessment MAY evaluate semantic health.

Machine assessment SHALL remain advisory.

Constitutional interpretation SHALL remain a human responsibility unless future constitutional specifications explicitly define otherwise.

8. Verification

Verification SHALL demonstrate:

Semantic completeness.

Relationship integrity.

Conceptual coherence.

Historical continuity.

Independent reproducibility.

Health assessment SHALL remain explainable.

9. Semantic Health Test

Semantic Health satisfies this specification when independent reviewers consistently identify equivalent strengths, weaknesses, conceptual gaps, and opportunities for semantic improvement across the Organodynamics corpus using only its canonical terminology and relationships.

Conformance

The Organodynamics corpus conforms to this specification when its semantic ecosystem remains coherent, historically continuous, conceptually balanced, discoverable, and independently verifiable despite continuous constitutional evolution.

Terminological Principle

Healthy disciplines do not merely accumulate concepts.

They continuously examine the relationships among those concepts,

removing ambiguity,

revealing hidden gaps,

and strengthening the language through which future understanding becomes possible.

Semantic Health therefore protects not individual words,

but the living ecosystem of meaning that binds the entire discipline together.
