

OGD-021 — Expressive Completeness

Status: Foundational

Authority: Terminology

Depends on:

- OGD-000 through OGD-020
 - OCS-000 through OCS-032
 - OAS-000 through OAS-031
 - OIS-000 through OIS-019
-

Purpose

This specification defines the constitutional principles governing the expressive completeness of the Organodynamics language.

A mature discipline requires more than correct terminology.

It requires a language capable of expressing every constitutionally relevant observation without unnecessary ambiguity or artificial limitation.

Expressive Completeness evaluates the capability of the language itself.

It does not evaluate individual concepts.

1. Objective

The objective of Expressive Completeness is to ensure that the Organodynamics language remains capable of representing the complete constitutional domain addressed by the discipline.

The language SHALL support:

Description.

Explanation.

Reasoning.

Comparison.

Evolution.

Discovery.

Reflection.

Future constitutional development.

2. Definition

Expressive Completeness is the observable constitutional capability of the Organodynamics language to represent every constitutionally relevant concept, relationship, process, and model without requiring semantic distortion.

Completeness SHALL concern expressive capability.

Not vocabulary size.

3. Expressive Components

Expressive capability SHALL emerge through the combined operation of:

Canonical concepts.

Concept taxonomy.

Conceptual grammar.

Semantic relationships.

Contextual semantics.

Conceptual models.

Canonical references.

Concept boundaries.

No single component SHALL be considered sufficient in isolation.

4. Expressive Gaps

The Organodynamics corpus SHOULD identify expressive gaps.

Examples include:

Missing foundational concepts.

Missing relationship types.

Missing contextual distinctions.

Missing semantic structures.

Missing conceptual models.

Every identified gap SHALL become an opportunity for constitutional investigation rather than immediate vocabulary expansion.

5. Minimal Sufficiency

The language SHOULD remain no more expressive than constitutionally necessary.

Additional expressive capability SHALL demonstrate:

Constitutional necessity.

Conceptual coherence.

Long-term value.

Compatibility with existing semantics.

Expressive growth SHALL remain disciplined.

6. Evolution

Expressive Completeness MAY improve through constitutional evolution.

Every improvement SHALL preserve:

Historical interpretability.

Semantic continuity.

Conceptual compatibility.

Terminological stability.

Evolution SHALL strengthen expression without fragmenting the language.

7. Verification

Verification SHALL demonstrate:

Coverage of constitutional concepts.

Coverage of constitutional relationships.

Coverage of constitutional processes.

Coverage of conceptual models.

Identification of expressive gaps.

Independent reproducibility.

8. Expressive Completeness Test

Expressive Completeness satisfies this specification when independent constitutional reviewers consistently conclude that every constitutionally relevant phenomenon within the scope of Organodynamics can be represented precisely using the canonical language, or that any remaining limitation has been explicitly identified as an expressive gap.

Conformance

The Organodynamics corpus conforms to this specification when its canonical language provides sufficient expressive capability to represent constitutional understanding while preserving semantic integrity, conceptual economy, historical continuity, and independently verifiable precision.

Terminological Principle

A discipline grows by discovering new truths.

Its language must therefore remain capable of welcoming those truths without abandoning its own coherence.

Expressive completeness is not achieved by collecting more words.

It is achieved when the language possesses exactly the expressive power required to describe reality faithfully,

while remaining simple enough for future generations to understand,

extend,

and trust.
