

OIS-000 — Implementation Charter

Status: Foundational

Authority: Implementation

Depends on:

- OCS-000 through OCS-032
 - OAS-000 through OAS-031
-

Purpose

The Organodynamics Implementation Specification (OIS) defines how constitutional and architectural principles are realized as executable systems.

The Constitution defines what must remain true.

Architecture defines how those truths are organized.

Implementation defines how those organizations become operational.

Implementation SHALL never redefine Architecture.

Architecture SHALL never redefine the Constitution.

Scope

The OIS specifies implementation responsibilities for:

Execution.

Persistence.

Communication.

Identity resolution.

Event processing.

Federation.

Storage.

Artificial intelligence integration.

Security.

Interfaces.

Operational behavior.

Implementation guidance SHALL remain replaceable.

Constitutional behavior SHALL remain invariant.

Implementation Philosophy

Every implementation SHALL be regarded as one possible realization of the Constitutional and Architectural Specifications.

No implementation SHALL become canonical merely because it was first.

Reference implementations demonstrate.

They do not legislate.

Constitutional Dependency

Every implementation decision SHALL be traceable to:

One or more Architectural Specifications.

One or more Constitutional Specifications.

Implementation SHALL remain accountable upward.

Never downward.

Implementation Freedom

Implementers MAY choose:

Programming languages.

Storage engines.

Deployment models.

Communication protocols.

Artificial intelligence providers.

User interface technologies.

Operational tooling.

Provided that constitutional behavior remains preserved.

Implementation Verification

Implementation correctness SHALL be evaluated through constitutional equivalence.

Equivalent implementation behavior SHALL matter.

Equivalent source code SHALL not.

Reference Implementations

The Organodynamics community MAY maintain one or more Reference Implementations.

Reference Implementations SHALL exist to:

Demonstrate feasibility.

Clarify architectural interpretation.

Support education.

Validate constitutional behavior.

Reference Implementations SHALL NOT redefine normative specifications.

Relationship Between Volumes

Volume I defines constitutional truth.

↓

Volume II defines architectural organization.

↓

Volume III defines executable realization.

Every implementation SHALL remain capable of being independently reconstructed from Volumes I and II.

Constitutional Principle

Implementations will change.

Architectures will evolve.

The Constitution will endure.

The purpose of the OIS is therefore not to preserve software.

Its purpose is to ensure that software remains a faithful expression of constitutional meaning throughout generations of technological change.
