

OIS-001A

Editorial Standard

Status

Normative

Purpose

This specification defines the structure, language, and publication rules for every Organodynamics Implementation Standard (OIS).

All future specifications SHALL conform to this Editorial Standard.

Consistency of structure is considered a constitutional requirement.

1. Specification Identity

Every specification SHALL expose:

Specification Identifier

Title

Version

Status

Publication Date

Superseded Specification (optional)

Required Dependencies

Authoring History

Constitution Version

Canonical Version

Example

OIS-700

Orchestration Protocol

Version 1.2

Status: Normative

Depends on:

OIS-000

OIS-200

OIS-400

OIS-600

2. Document Categories

Every document SHALL belong to exactly one category.

Normative

Defines constitutional requirements.

Protocol

Defines constitutional behavior.

Model

Defines constitutional concepts.

Reference

Defines one possible implementation.

Informative

Provides explanation.

Contains no constitutional requirements.

Example

Provides illustrative scenarios.

Not normative.

Appendix

Supports another specification.

Never replaces constitutional requirements.

3. Requirement Levels

The following words SHALL carry constitutional meaning.

SHALL

Mandatory constitutional behavior.

SHALL NOT

Constitutionally prohibited.

SHOULD

Strong recommendation.

Deviation requires explicit justification.

MAY

Optional constitutional behavior.

MUST

Reserved for constitutional invariants.

Violation constitutes constitutional failure.

4. Mandatory Section Structure

Every normative specification SHALL contain the following sections.

Status

Purpose

Scope

Definitions

Normative Requirements

Constitutional Invariants

Lifecycle (if applicable)

Validation

Conformance

Compatibility

Revision History

Additional sections MAY exist.

Mandatory sections SHALL remain identifiable.

5. Constitutional Objects

Every constitutional object SHALL be defined using the same template.

Identifier

Purpose

Definition

Required Properties

Required Behaviors

Lifecycle

Relationships

Constraints

Invariants

Validation

Examples (optional)

No constitutional object SHALL omit its invariants.

6. Requirement Numbering

Every constitutional requirement SHALL possess a stable identifier.

Example

OIS-700-REQ-001

OIS-700-REQ-002

OIS-700-REQ-003

Requirement identifiers SHALL remain stable across revisions.

Deprecated requirements SHALL remain referenceable.

7. Cross References

Specifications SHALL reference constitutional requirements by identifier.

Example

"This operation SHALL satisfy OIS-700-REQ-014."

References SHALL NOT depend upon page numbers.

8. Definitions

Every defined constitutional term SHALL appear in the Canon.

Specifications SHALL reference canonical definitions.

Specifications SHALL NOT redefine canonical terminology.

If additional meaning is required,

a constitutional proposal SHALL be created.

9. Examples

Examples SHALL remain explicitly non-normative.

Implementations SHALL conform to requirements,

not to examples.

10. Reference Implementations

Reference implementations SHALL illustrate constitutional behavior.

Reference implementations SHALL NOT become constitutional authority.

Implementations MAY differ.

Constitutional behavior SHALL remain equivalent.

11. Validation

Every normative specification SHALL define observable validation criteria.

Validation SHALL answer:

How does a Builder know this specification has been correctly implemented?

Validation SHALL avoid implementation-specific assumptions.

12. Change History

Every revision SHALL expose:

Reason

Evidence

Affected Requirements

Compatibility

Migration Guidance

Constitutional Impact

Unknown Consequences

13. Deprecation

Deprecation SHALL preserve:

Historical text

Historical identifiers

Migration guidance

Constitutional rationale

Deprecated content SHALL remain searchable.

14. Editorial Independence

Editorial improvements SHALL NOT modify constitutional meaning.

Changes affecting constitutional meaning SHALL require constitutional evolution.

Formatting SHALL remain independent from constitutional interpretation.

15. Constitutional Language

Normative language SHALL be:

Observable

Verifiable

Technology-independent

Implementation-independent

Semantically precise

The specification SHALL describe constitutional behavior.

It SHALL avoid prescribing implementation strategy unless constitutionally required.

16. Builder Rule

If a Builder cannot determine whether an implementation conforms,

the specification is incomplete.

Specifications SHALL be written until independent Builders consistently produce constitutionally equivalent implementations.

Editorial Axiom

A specification is complete only when two independent Builders, using different technologies and without communicating, can produce implementations that exhibit equivalent constitutional behavior.

Equivalent code is not required.

Equivalent architecture is not required.

Equivalent technology is not required.

Equivalent constitutional meaning is required.
