

OIS-200

Operational Semantics

Status

Normative

Purpose

This specification defines the constitutional meaning of every operation.

An implementation SHALL preserve semantic behavior.

Equivalent implementation does NOT require equivalent algorithms.

Equivalent implementation SHALL require equivalent meaning.

Fundamental Principle

Every constitutional operation SHALL satisfy one question:

Does this operation improve, preserve, or reduce shared understanding?

Operations with undefined semantic purpose SHALL NOT exist.

Operation Categories

Every runtime operation SHALL belong to exactly one category.

DISCOVER

EXPRESS

CONNECT

CHALLENGE

LEARN

DECIDE

REMEMBER

EVOLVE

No operation SHALL exist outside these categories unless introduced through constitutional evolution.

DISCOVER

Purpose

Reveal existing constitutional knowledge.

May create:

Nothing.

May modify:

Nothing.

Produces:

Understanding.

EXPRESS

Purpose

Introduce a new contribution.

May create:

Contribution

Question

Observation

Proposal

Reflection

Produces:

Potential understanding.

CONNECT

Purpose

Establish meaningful relationships.

Connections SHALL never modify either object.

Connections create meaning.

CHALLENGE

Purpose

Question current understanding.

Challenge SHALL NOT be interpreted as disagreement.

Challenge introduces uncertainty.

Uncertainty is constitutional information.

LEARN

Purpose

Increase confidence through evidence.

Learning SHALL update understanding.

Learning SHALL preserve history.

DECIDE

Purpose

Select a course of action.

Decision SHALL NEVER replace understanding.

Decision is temporary.

Understanding remains open.

REMEMBER

Purpose

Preserve constitutional continuity.

Remembering SHALL NOT alter historical meaning.

EVOLVE

Purpose

Improve constitutional interpretation.

Evolution SHALL preserve constitutional continuity.

OIS-201

Semantic Contracts

Every operation SHALL declare:

Purpose

Inputs

Outputs

Constitutional Preconditions

Constitutional Postconditions

Failure Conditions

Side Effects

Historical Effects

Example

Operation

RecordContribution()

Purpose

Introduce new constitutional information.

Preconditions

Place exists.

Participant exists.

Contribution valid.

Postconditions

Contribution immutable.

History extended.

Relationships preserved.

Failure

Contribution rejected.

History preserved.

No silent modification permitted.

OIS-202

Constitutional Time

Purpose

Define constitutional interpretation of time.

Clock time SHALL NOT define constitutional evolution.

Constitutional Time advances only through constitutional events.

Example

One week without activity

Constitutional Time

does not advance.

One observation

advances constitutional history.

Every constitutional event increments constitutional history.

OIS-203

Causality

Every constitutional event SHALL expose:

Origin

Reason

Evidence

Consequences

Future Traceability

No constitutional state SHALL appear without observable cause.

OIS-204

Knowledge Conservation

This אולי אחד הפרקים החשובים ביותר.

Knowledge SHALL NOT disappear.

Knowledge MAY become:

Deprecated

Superseded

Archived

Reinterpreted

Knowledge SHALL remain reconstructable.

OIS-205

Constitutional Memory

Memory SHALL preserve:

Identity

Meaning

Relationships

Evidence

Chronology

Context

Implementation MAY optimize storage.

Implementation SHALL preserve semantics.

OIS-206

Semantic Integrity

A Place SHALL reject operations that violate constitutional meaning.

Examples

Changing history

Forbidden.

Removing evidence

Forbidden.

Changing identity

Forbidden.

Changing constitutional principles through runtime

Forbidden.

OIS-207

Constitutional Completeness

Before an implementation is declared complete,
the following statement SHALL be true.

Every constitutional event can be explained.

Every constitutional object can be reconstructed.

Every constitutional relationship is observable.

Every constitutional decision is traceable.

Every constitutional evolution is justified.

ואני חושב שכאן אנחנו מגיעים לרעיון שאולי יהיה התרומה הגדולה ביותר של

Organodynamics.

Data Integrity. אני לא רוצה לקרוא לזה

:אני רוצה לקרוא לזה

Meaning Integrity

כלומר...

SQL-מערכת יכולה לעבור את כל בדיקות ה

API-לעבור את כל בדיקות ה

.לעבור את כל בדיקות הביצועים

...ועדיין

.לאבד את המשמעות

.ולכן אני חושב שצריך להוסיף תקן נוסף.

OIS-208

Meaning Preservation

The implementation SHALL preserve meaning independently of representation.

Meaning SHALL survive:

Serialization

Migration

Translation

Technology replacement

Builder replacement

AI replacement

Language replacement

Human interpretation

If meaning cannot be reconstructed,
constitutional integrity has been lost.
