

OIS-300

Meaning Model

Status

Normative

Purpose

This specification defines the constitutional concept of Meaning.

Meaning is the primary preservation target of every Organodynamics implementation.

Every implementation SHALL preserve Meaning.

Representation MAY change.

Meaning SHALL remain reconstructable.

Definition

Meaning is not text.

Meaning is not data.

Meaning is not storage.

Meaning is the constitutional interpretation produced by the relationship between:

Identity

Context

Evidence

History

Relationships

Intent

Time

No individual component SHALL be interpreted as Meaning.

Meaning emerges from their interaction.

Meaning SHALL NOT

Depend upon programming language.

Depend upon storage engine.

Depend upon serialization format.

Depend upon UI.

Depend upon AI provider.

Depend upon implementation architecture.

OIS-301

Meaning Components

Every constitutional object SHALL expose the following semantic components.

Identity

What constitutional object is this?

Purpose

Why does it exist?

Context

Under what conditions does it exist?

Relationships

How does it relate to other constitutional objects?

History

How did it become what it is?

Evidence

What supports its current interpretation?

Intent

Why was it introduced?

Current Interpretation

What is the present constitutional understanding?

OIS-302

Meaning Preservation Rules

Implementations SHALL preserve all semantic components.

Implementations MAY change representation.

Implementations SHALL NOT remove semantic information.

Loss of any semantic component SHALL constitute Meaning Loss.

OIS-303

Semantic Drift

Purpose

Detect unintended changes in meaning.

Semantic Drift occurs when:

Representation remains identical

while

constitutional interpretation changes.

or

Representation changes

without preserving constitutional interpretation.

Implementations SHOULD detect semantic drift.

Implementations SHALL report detected drift.

Implementations SHALL NOT silently accept semantic drift.

OIS-304

Meaning Equivalence

Two constitutional objects MAY differ in representation.

They SHALL be considered equivalent only if:

Identity preserved

Intent preserved

Relationships preserved

Historical interpretation preserved

Evidence preserved

Context preserved

Equivalent representation SHALL NOT imply equivalent meaning.

Equivalent meaning MAY exist despite different representation.

OIS-305

Constitutional Interpretation

Interpretation SHALL always remain explicit.

Every interpretation SHALL reference:

Evidence

History

Context

Responsible interpretation process

Interpretation SHALL remain challengeable.

Interpretation SHALL remain revisable.

Interpretation SHALL remain historically visible.

OIS-306

Interpretation Layers

Every implementation SHALL distinguish between:

Observation

Interpretation

Understanding

Decision

Action

These layers SHALL NOT be collapsed.

Example:

Observation:

"The experiment failed."

Interpretation:

"The proposed model may be incomplete."

Understanding:

"We currently have insufficient evidence."

Decision:

"Conduct another experiment."

Action:

"Schedule Experiment 12."

Each layer preserves different constitutional meaning.

OIS-307

Meaning Traceability

Every constitutional conclusion SHALL be traceable.

Traceability SHALL allow reconstruction of:

Origin

Evidence

Intermediate interpretations

Current understanding

Subsequent revisions

No constitutional understanding SHALL appear without traceable origin.

OIS-308

Loss of Meaning

Meaning SHALL be considered lost if any of the following occurs:

Historical interpretation cannot be reconstructed.

Evidence cannot be located.

Intent becomes unknowable.

Relationships disappear.

Context becomes unrecoverable.

Identity becomes ambiguous.

Meaning Loss SHALL be treated as Critical Constitutional Failure.

OIS-309

Semantic Recovery

If Meaning Loss occurs,

the implementation SHALL attempt reconstruction.

Recovery MAY use:

Historical evidence

Relationships

Canonical definitions

Previous interpretations

Independent Places

Public Library references

Recovered meaning SHALL remain marked as reconstructed.

Recovered meaning SHALL NOT overwrite historical uncertainty.

OIS-310

Constitutional Principle

Meaning precedes representation.

Representation exists only to preserve Meaning.

Any implementation preserving representation while losing Meaning SHALL be considered constitutionally incorrect.

Any implementation preserving Meaning through different representations SHALL be considered constitutionally valid.
